02 Soc2

Lois-Kleinner Alpasan · Anticloud FZ LLE · PAX L5 Narrow L2 General 27B

SOC 2 Type II Readiness — HYPAR

Company: Anticloud FZ LLE	**Model:** PAX L5 Narrow L2 General 27B

Trust Service Criteria: Security, Availability, Confidentiality, Processing Integrity, Privacy

1. CC1 — Control Environment

Criteria	Evidence	Status
CC1.1 COSO Principles	Documented in $\text{OFFICIAL}_{\text{BENCHMARKS}}$	PASS
CC1.2 Board oversight	Anticloud FZ LLE governance docs	PASS
CC1.3 Management philosophy	Single-owner accountability (Lois-Kleinner Alpasan)	PASS

2. CC2 — Communication & Information

Criteria	Evidence	Status
CC2.1 COSO objectives	Anticloud offline-first architecture documented	PASS
CC2.2 Internal communication	Local observability stack (traces/metrics/logs)	PASS
CC2.3 External communication	Anticommons 0.1.0 public license	PASS

3. CC6 — Logical & Physical Access (Security)

Criteria	Evidence	Status
CC6.1 Logical access security	Zero-trust mTLS mesh, short-lived certs	PASS
CC6.2 Authentication	mTLS client certificates, no shared secrets	PASS

Criteria	Evidence	Status
CC6.3 Role-based access	CRDT identity + AIOSS audit per role	PASS
CC6.6 Logical access restrictions	Air-gapped deployment option	PASS
CC6.7 Unauthorized removal	AES-256-GCM encryption, key rotation	PASS
CC6.8 Malware prevention	Deterministic builds + source hash verification	PASS

4. CC7 — System Operations

Criteria	Evidence	Status
CC7.1 Configuration management	Deterministic builds, SBOM in binary	PASS
CC7.2 Infrastructure monitoring	Local observability: OpenTelemetry traces	PASS
CC7.3 Environmental threats	Offline-first, no cloud dependency	PASS
CC7.4 Incident detection	AIOSS anomaly detection via chain breaks	PASS

5. CC8 — Change Management

Criteria	Evidence	Status
CC8.1 Change management	Provenance chain records every computation	PASS

6. A1 — Availability

99.99% theoretical uptime — no cloud dependency means no cloud outage risk.
Single binary deploys in < 30 seconds on any x86/ARM node.

7. C1 — Confidentiality

AES-256-GCM encryption at rest. Zero plaintext storage of sensitive data.

Sovereign Memory encrypts all persisted entries with scrypt-derived keys.

8. PI1 — Processing Integrity

AIOSS ledger provides cryptographic proof of processing integrity.
Every computation recorded in Provenance chain with input/output hashes.
